

RAIL CASE STUDY

BAILEY RAIL

Eccleston Engineering has been supplying the Rail industry for several years and, as such we have had to develop our trackside fabrications to suit the advancement of technology used by Network Rail.

Our fabrications can be viewed extensively throughout the UK with installations as diverse as simple camera brackets at small unstaffed local stations to major display frames at national hub stations.

In this instance we were asked to design and fabricate the gantries and housing brackets to accommodate a new suite of display screens being installed at Stanstead Abbots station.

Close collaboration with the installation team, electrical designers and facilities managers was required to devise the correct solution.

Eccleston Engineering integrated with the multi-disciplined team on this design and time critical element to ensure the solution was delivered on-time and on-budget.

Throughout the entire process we always considered the requirement to deliver this project safely, reliably and to the highest standard.

CUSTOMER	Bailey Rail
LOCATION	National
CHALLENGE	Design and Fabricate brackets and gantry
SOLUTION	Close liaison with the entire team to ensure a future-proof, lasting installation
